## Flow of Funds Summary Statistics

### Third Quarter 2011

---

Debt of the domestic nonfinancial sectors expanded at a seasonally adjusted annual rate of 4¼ percent in the third quarter of 2011, about 1¼ percentage points faster than the pace registered in the second quarter.

Household debt declined at an annual rate of 1¼ percent in the third quarter, continuing the contraction that began in the third quarter of 2008. Home mortgage debt fell at an annual rate of 1¾ percent in the third quarter, slightly less of a decline than in the first half of the year. In contrast, consumer credit rose at an annual rate of 1¼ percent, the fourth consecutive quarter of increase.

Nonfinancial business debt rose at an annual rate of 3½ percent in the third quarter, 1 percentage point slower than the pace registered in the second quarter of this year. Corporate bonds outstanding and business loans increased while commercial mortgage

debt continued to decline, albeit at a more moderate pace than during 2010.

State and local government debt remained unchanged in the third quarter. Federal government debt increased at an annual rate of 14 percent in the third quarter.

At the end of the third quarter of 2011, the level of domestic nonfinancial debt outstanding was \$37.8 trillion; household debt was \$13.2 trillion, nonfinancial business debt was \$11.5 trillion, and total government debt was \$13.1 trillion.

Household net worth—the difference between the value of assets and liabilities—was \$57.4 trillion at the end of the third quarter, about \$2.4 trillion less than at the end of the previous quarter.

## Flow of Funds Accounts, Third Quarter 2011

---

This publication presents the Flow of Funds Accounts for 2011:Q3.

**Data revisions and other changes.** The statistics in the attached tables reflect the use of new or revised source data. Most significant revisions appear in recent quarters; however, new source information resulted in changes to data for earlier periods.

1. In the nonfarm noncorporate business sector (tables F.103, L.103, B.103, and R.103), data have been revised from 2009:Q1 forward, owing to benchmark statistics available from the IRS/SOI for 2009.

2. The federal government sector (tables F.106 and L.106) has been modified to show additional detail on the composition of Treasury debt. Treasury bills, considered short-term debt, are now shown separately from other Treasury debt. This new detail is also shown on the instrument table for the Treasury securities (tables F.209 and L.209).

3. The instrument tables on municipal securities and loans (tables F.211 and L.211) have been revised from 2004:Q1 forward to reflect a change in data sources. Data on debt outstanding and net issuance for state and local governments, nonprofit organizations, and nonfinancial corporate business (industrial revenue bonds) are now based on data from Mergent, a private data vendor. The new data indicate that municipal securities and loans outstanding in 2004:Q1 is \$740 billion greater than previously estimated in the flow of funds accounts. The estimate of household holdings of municipal securities and loans is revised up by about \$840 billion, on average, from 2004 forward.

### **Explanatory notes for tables D.1, D.2, and D.3.**

Domestic debt comprises credit market funds borrowed by U.S. entities from both domestic and foreign sources, while foreign debt represents amounts borrowed by foreign financial and nonfinancial entities in U.S. markets only. Financial sectors consist of government-sponsored enterprises, agency- and GSE-backed mortgage pools, the monetary authority, and private financial institutions. Credit market debt consists of debt securities, mortgages, bank loans, commercial paper, consumer credit, U.S. government loans, and other loans and advances; it excludes trade debt, loans for the purpose of carrying securities, and funds raised from

equity sources. This definition is consistent with the presentation of credit market borrowing and lending on tables F.1 through F.4. Net lending (+) or net borrowing (-) on the individual sector tables and the matrix is defined as net acquisition of financial assets less net increase in liabilities.

Growth rates in table D.1 are calculated by dividing seasonally adjusted flows from table D.2 by seasonally adjusted levels at the end of the previous period from table D.3. Seasonally adjusted levels in flow of funds statistics are derived by carrying forward year-end levels by seasonally adjusted flows. Growth rates calculated from changes in unadjusted levels printed in table L.2 can differ from those in table D.1.

**Relation of Flows to Outstandings.** Estimates of financial assets and liabilities outstanding are linked to data on flows. However, figures on outstandings contain discontinuities or breaks in series that could affect analysis of particular relationships over time. Specifically, outstandings in the Flow of Funds Accounts are related to flows in the following way:

$$\text{Outstanding}_t = \text{Outstanding}_{t-1} + \text{Flow}_t + \text{Discontinuity}_t$$

where “t” is the time period.

Discontinuities result from changes in valuation, breaks in source data, and changes in definitions. For most series, the value of the discontinuity is zero for nearly all time periods. However, in a few instances, the discontinuity is nonzero for almost all time periods, or is quite large in a particular quarter, such as a period when there is a sharp increase or decrease in equity prices or a major break in source data.

The discontinuities in a series can distort estimated rates of growth in assets and liabilities between periods. In order to minimize these distortions, percentage changes in assets and liabilities in flow of funds releases should be calculated as:

$$\text{Percentage change}_t = (\text{Flow}_t / \text{Outstanding}_{t-1}) * 100$$

**Preliminary Estimates.** Figures shown for the most recent quarter in these tables are based on preliminary and incomplete information. A summary list of the principal sources of information available when the latest quarter's data were compiled is provided in a table following this introduction. The distinction between “available” data and “missing”

data is not between final and preliminary versions of data, but rather between those source estimates that are fully ready when the latest quarterly publication is compiled and those that are not yet completed. However, the items that are shown as available are, in general, also preliminary in the sense that they are subject to revision by source agencies.

**Margins of Uncertainty.** Flow of funds statistics are subject to uncertainties resulting from measurement errors in source data, incompatibilities among data from different sources, potential revisions in both financial and nonfinancial series, and incomplete data in parts of the accounts. The size of these uncertainties cannot be quantified in precise statistical terms, but allowance for them is explicitly made throughout the accounts by the inclusion of “discrepancies” for various sectors and instrument types. A discrepancy for a sector is the difference between its measured sources of funds and its measured uses of funds. For an instrument category, a discrepancy is the difference between measured funds borrowed through the financial instrument and measured funds lent through that instrument. The size of such discrepancies relative to the main asset or liability components is one indication of the quality of source data, especially on an annual basis. For quarterly data, differences in seasonal adjustment procedures for financial and nonfinancial components of the accounts sometimes result in discrepancies that cancel in annual data.

**Availability of Data.** Flow of funds statistics are updated about ten weeks following the end of a quarter. This publication — the Z.1 release — is available from the Board's Publications Services.

Flow of funds data are also available electronically through the Internet at the following location:

This Internet site also provides coded tables and historical annual tables beginning in 1945 that correspond to the tables published in this release. There are also compressed ASCII files of quarterly data for seasonally adjusted flows, unadjusted flows, outstandings, balance sheets, debt (tables D.1, D.2, and D.3), and supplementary tables.

In addition, these data, as well as data for the quarterly and annual *Integrated Macroeconomic Accounts for the United States* tables, are available as customizable download datasets through the Data Download Program (**DDP**) at the following location:

General notes: A = assets; L = liabilities. Domestic nonfinancial sectors (columns 9 and 10) are households and nonprofit organizations, nonfinancial business, state and local governments, and federal government. Equity included in line 2 is the sum of corporate equities (line 25) and equity in noncorporate business (line 32). The matrix shows a discrepancy in column 17 for monetary gold (line 4) because by international accounting convention, monetary gold is a financial asset without a corresponding liability.
